Comprehension

Read the passage and answer the questions that follow:

Imagining a future where clean air is no longer a dream and our cities are not smog filled concrete jungles, this could well become a reality in the coming years if the world begins to increasingly adopt the use of cleaner options like alternate-fuel vehicles.

The rise in economic activity and the burgeoning population have led to a tremendous demand in the transport sector, especially in urban India. By 2020, India's urban population is expected to grow five fold to a staggering 200 million while pollution is expected to grow seven times. With this tremendous growth has emerged a very critical issue of keeping air and noise pollution in urban areas under control.

If we can have 3 lakh electric vehicles(EVs) on the roads by 2020 including three wheelers, cars and scooters we would have reduced pollution by 16 lakh metric tonnes, saved Rs.3700 crores in foreign exchange earnings and substantially reduced health care costs. Small electric buses , three wheelers and electric scooters are ideal for city mobility in India but it could take between five to ten years before they become viable for commercial use.

The electric vehicle uses electric energy which is stored in batteries that feed the electric motor. Driving an electric vehicle is easier and more relaxing than a traditional one because it has no speed-gear and functioning noise. It is enough to turn the key and press the acceleration pedal; you need only two driving pedals-accelerator and brake.

The need to reduce air pollution along with the availability of new advanced batteries have allowed EVs to reappear as a clean alternative to internal combustion vehicles. Electric drive systems are virtually non polluting and extremely energy efficient. While internal combustion vehicles can convert about 20% of the chemical energy in gasoline into useful work, 75% or more of the energy from a battery has productive power in an electric vehicle

Electric motors can also provide power at almost any engine speed . While internal combustion engines must be revved upto high rpm to achieve maximum power, electric motors provide nearly peak power even at low speeds. This gives electric vehicles strong acceleration performance from the start.

Apart from being environment and user friendly, there are several other reasons for alternate fuel cars to flourish in India. Firstly, electricity for EVs can be produced from various sources for which India has natural resources and does not need to depend on the import of oil. Although EVs will not replace LPG, CNG or petrol and diesel for inter city use, the infrastructure required for EVs in the form of electricity distribution infrastructure, is already available in all the major cities and minimum costs are required to install additional capacity.
